Together towards a peat-free future

Core competence in peat substitute products

We have been producing peat-free substrates for 35 years and are intensively committed to developing innovative peat substitute products. At the same time, we are constantly improving our formulas and our technology. We test and research tirelessly in order to support not only the end consumer but also commercial horticulture with high-yield products designed to help them phase out peat.

We lead the way with our own substrate brands: BIOTERRA® is our greenest substrate brand, 100 % peat-free and BIO. With EIFELHUM® and HUMOFLO® we are on the right track and offer a growing number of peat-free and peat-reduced products.

Feels at home on moorland:
the heath meadow butterfly

Our greenest substrate brand – Bio and 100 % peat-free

- High proportion of regional raw materials
- Sustainable packaging with a high percentage of recycled material
- Cooperation partner of the WWF Germany
- Premium quality

Bio potting soil

Peat-free · for indoor, balcony and garden plants

- Bioterra® potting soil is a nutrient-rich, purely natural and peat-free mixture consisting of our own green waste compost, bark humus, Fiohta® wood fibers and coconut fibers.
- It is enriched with organic fertilizer and broken expanded clay to optimally nourish all indoor and outdoor plants.

High-quality covering materials made from native bark

Scots pine decor bark

For designing attractive gardens

- EIFELHUM® Scots pine decor bark is wonderfully fragrant with the scent of local forest Scots pine.
- Increased tannic acids inhibit the growth of wild herbs even better than pine bark.

Article No.	Coarseness	Content	Unit	Pallet	EAN code

Natural fiber mulch

For effectively designing gardens – for covering and improving the soil

- EIFELHUM® natural fiber mulch is twice as productive as bark mulch and optimally suited for slopes.
- Its surface protects the subsoil and reduces the absorption of seeds and herbs more than bark mulch.
- Protects the soil from drying out.
- Also suitable for raised beds.

Article No.	Coarseness	Content	Unit	Pallet	EAN code
110510-00-51-EUR	10-30	60 l	51	Euro pallet	5411787111059

Bark mulch

For effectively designing gardens – for covering and improving the soil

- EIFELHUM® bark mulch has optimum covering properties and visibly slows the growth of undesirable weeds.
- The soil dries out less under the bark mulch and thus offers ideal living conditions for microorganisms, which in turn increase the fertility of the soil.

Article No.	Coarseness	Content	Unit	Pallet	EAN code

We burn for ecologically valuable charcoal from Namibia

Why is charcoal from Namibia so ecologically valuable?

The Namibian savannah is becoming overgrown. Excessive bush encroachment is depriving animals, plants and people of their valuable natural habitat. The cheetah is a species of particular concern, and there are many other animal and plant species that suffer from bush encroachment. The excess bush wood consists to a large extent of acacia, a particularly dense and heavy wood that has excellent properties for charcoal production. Due to its high density, it glows for a particularly long time and consistently, produces little smoke and burns up without much residue. We at DHG support the Namibian clearing project together with our partners. From the extracted, abundant bush wood, we produce high-quality barbecue charcoal for relaxed barbecue events with premium standards. In this way, the protection of the cheetah's natural habitat is turned into ecologically valuable barbecue charcoal. And cheetahs can once again hunt freely across the savannah.

NAMBUKO® PRODUKTE
SCHONEN WÄLDER
UND UNTERSTÜTZEN
DIE ARBEIT DES WWF

Greener barbecues with the embers of Namibia

NambuKO® – the good charcoal

Relaxed premium barbecues with Namibian flair

- Transparent and safe FSC® certified origin with full traceability.
- High social standards in BSCI audited production sites are particularly important to us.
- The bush wood for our charcoal comes from the clearing of the savannah thus protecting people and nature in Namibia.
- Quality naturally according to DIN/EN.
- NambuKO® barbecue charcoal is made from mixed wood such as acacia (senegalia), blood fruit tree (terminalia prunioides), color catkin bush (dichrostachya cinera).
- Earthworm audited.
- Cooperation partner of the WWF Germany.

Barbecue charcoal

- Easy to light with a high temperature for delicious sizzling grilled food.
- The excellent size of 30–50 mm and the high density of the bush wood provide for a particularly good quality for long-lasting and consistent heat release.

Only natural wood is used for the production of Flammenco® firewood. We offer deciduous wood, hardwoods and beech wood. All types are also available FSC® certified (FSC® C111735).

- Flammenco® firewood is only delivered when it has reached the ideal degree of dryness. As a result, it achieves particularly high heat values.
- Flammenco® firewood provides a cosy fire in your fireplace at home.
- We would like to point out that for firewood the declaration 12,5 dm³ is decisive.
- Log length: approx. 25–33 cm.

Quality firewood hardwoods

124000-08-70-EIN	15 kg	70	One-way pallet	4042316201999

Sustainable foresight

We are DHG – owner-managed and down-to-earth, just like the wood our products are made of.

Ever since the company was founded in 2000, sustainability and nature conservation have been particularly close to our hearts. We manufacture our products in four of our own production facilities and twelve partner plants. We are a cooperation partner of the WWF Germany and have been committed to ecologically valuable products and fair working conditions in our transparent supply chains for many years. With our brands BIOTERRA® for substrate and NAMBUKO® for barbecue charcoal, we are setting new standards in the market. Together with the WWF, we pursue the goal of switching our entire range of barbecue charcoal and briquettes to 100 % FSC®-certified and BSCI-audited Namibian products.

- Personal and easily reachable sales team
- Full control over the high quality of our products thanks to our own raw materials
- Reliable and punctual delivery of large quantities through modern, efficient production
- Flexible logistics tailored to your individual requirements – always as green as possible

We are experts when it comes to private labels.

We have many years of expertise in our products and markets. The know-how together with our pronounced customer orientation makes us a sought-after partner for your own-brand business with high-quality charcoal, fuel and substrate products. Together we have been successful season after season for many years.

With every fiber for nature

Grown big.

Since 1989 we have been producing bark products and culture substrates at the highest level in our factory, EIFELHOLZ AG, located in the Belgian part of the Eifel. In 2023 we were able to commission our new, state-of-the-art production hall with 12 production lines. This gives us the sovereignty to produce even particularly large-volume assortments reliably and on time.

Green and nearby.

We produce the electricity for our plant ourselves from renewable sources and even the waste heat from production is efficiently utilized. Extensive woodlands in the beautiful Western Eifel region provide us with many valuable raw materials in the immediate vicinity. We also compost green waste on a large scale ourselves. All of this ensures short delivery and transport routes and supports the important idea of recycling.

We are happy to provide advice!
